

# CARR SCOTT

---

## SOFTWARE INCORPORATED

1 November 2013

Today we are pleased to announce that comForte 21 is planning to acquire our Escort SQL, Journaling and RANGER product set. comForte's worldwide reach of sales and support, with over 70 NonStop software experts, unlocks the benefits of the Escort suite of products to customers worldwide.

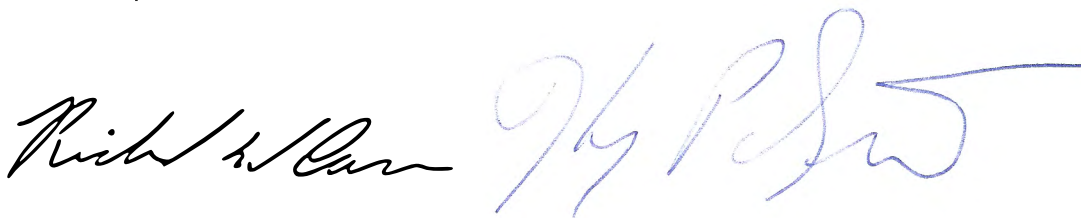

This is a planned product acquisition of just these products. Carr Scott Software will continue to own, maintain and support our AutoTMF, AutoSYNC and SDR products and our exclusive distribution arrangement with HP for these products remains unchanged.

If this transaction closes as expected on or before 31 December 2013, we will work closely with comForte not only to bring the Escort suite of products to a whole new set of customers internationally but we will continue to support our existing customers over an extended period both directly and in conjunction with comForte's support and sales teams as that transition happens over time.

We are extremely proud of the technical solutions and modernization that the Escort SQL suite of products enables for NonStop customers and now expanding the reach worldwide through comForte makes perfect sense given HP's extraordinary re-investment in the HP NonStop platform.

Again, while we are excited about the opportunities that this provides for new Escort SQL users, we remain committed as ever to our existing customers and we will work as hard as ever to make sure that you are very well supported now and over time as the products transition to comForte's capable hands.

Sincerely,

Dr. Richard Carr      &      Harry Scott, Co-founders
